INTEROP TECHNOLOGIES EXPANDS OPERATIONS TO MEXICO

The company will focus on increasing market share in the Latin American market

Mexico, DF—July 15, 2009—Interop Technologies, the premier provider of core wireless solutions for messaging, device management and connectivity gateways, announced today that it will enter the Mexican market and begin offering its highly scalable solutions. The company plans to invest U.S. \$30 million over the next three years in Latin America, 40 percent of which will be earmarked for Mexico.

Interop Technologies delivers robust technology solutions and focuses on building reliable, scalable and future proof solutions for telecommunications companies. Interop improves SMS, MMS, short code, mobile Internet access, and device management services delivered to millions of wireless customers every day. It is also the only company that provides flexible hosted and turnkey deployments that help reduce costs in this tough economy. Interop is the only provider enabling wireless service operators to migrate from one deployment option to another without changing technologies and risking service disruption.

Interop Technologies executives are visiting Mexico to meet with analysts and prospective clients to inform them about their wide variety of products and services. Interop is currently in negotiations with potential clients in Mexico to enter into trial agreements and introduce its solutions to the region.

Damian Sazama, Vice President of Marketing at Interop, said, "The Mexican market has more than 76 million mobile phone users who demand additional messaging services. Interop Technologies offers future proof messaging, device management, and connectivity gateways that will help operators improve customer satisfaction levels and obtain additional revenues by offering these services efficiently and with massive scalability." Additionally, Eddy Cojulun, Sales Support Representative at Interop Technologies explained, "Interop can offer Mexican carriers the flexible deployment options they need to meet their current financial goals. Operators may choose to host their wireless solutions with Interop but will be provided a clear path for taking those services back 'in-house' as the operator's business needs change."

Recently, Interop Technologies achieved 53,000 Message Delivery Attempts (MDA) per second on its SMSC 4 Series solution, thus setting a new throughput record for SMS Centers. This new

breakthrough shatters Interop's existing throughput record of 36,000 MDAs per second and changes operators' expectations for throughput from what was previously available.

About Interop Technologies

Interop Technologies (www.interoptechnologies.com) is the premier provider of wireless solutions for messaging, device management, and connectivity gateways. The world leader in building reliable and scalable technologies, Interop is the *only* company that offers affordable, hosted and turnkey deployments for today's tough economic conditions. A proven partner to more than 55 telecom operators, Interop powers SMS, MMS, short code, mobile Internet access, and device management services delivered to millions of wireless customers every day. Interop is headquartered in Fort Myers, Florida. The company also has facilities in Atlanta, Dallas, and Sao Paulo.
